### **DETAILED ACTION**

1. This office action is in response to applicant's response filed on 10/30/2008.
2. Claims 1, 34 and 66-67 are amended.
3. Claims 2, 4-5, 8-11, 13, 17-31, 35-41, 43-45 and 48-63 are cancelled.
4. Claims 1, 3, 6-7, 12, 14-16, 32-34, 42, 46-47 and 64-67 have been considered.

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10/30/2008 has been entered.

### ***Response to Arguments***

1. Applicant's arguments are persuasive in the light of Applicant Amendment. Therefore the rejections of claims have been withdrawn.

***Allowable Subject Matter***

1. Claims 1, 3, 6-7, 12, 14-16, 32-34, 42, 46-47 and 64-67 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The primary reasons for the allowance of the independent claims 1 and 32 are the inclusion of the following limitations that are not found in the prior art and they are uniquely distinct features. The closest prior art is Oberman et al, US Pub. No. 2001/0023425 A1.

Nakano discloses a microprocessor comprising a first multiplier configured to receive a first multiplier operand and a first multiplicand operand; and a second multiplier configured to receive a second multiplier operand and a second multiplicand operand; wherein said first and second multipliers are coupled together and are configured to perform at least two types of multiplication, and wherein said first type of multiplication is vector multiplication and is performed when said first and second multiplicand operands each comprise different components of a vector multiplicand operand and said first and second multiplier operands each comprise different components of a vector multiplier operand.

However, this art, fails to anticipate or render the following limitation:

"Claims 1 and 32: a second logic for outputting a modulus which is signed in the modular multiplication based on a carry input value Carry-in of a current clock, determined from a carry value cin for correction of a previous clock, and on a sign bit of the multiplicand; and

Art Unit: 2434

a third logic for determining the carry input value Carry-in of the current clock from the carry value cin for correction of the previous clock and receiving the signed multiplicand and the signed modulus, and calculating a result value of the modular multiplication by iteratively performing a full addition operation on a carry value C and a sum value S of the full addition operation, found at the previous clock.”

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
